

THE MOUNTAIN TOP ADVANTAGE

Consistent Comfort

Proprietary continuous-pour process keeps the latex from settling

Unflawed

No one-size-fits-all mold, no gluing or seams

Cloud-like Smoothness

Plush, luxurious feel preferred by consumers

Exceptional Durability

Advanced chemistry and continuous motion result in a stronger, more durable product

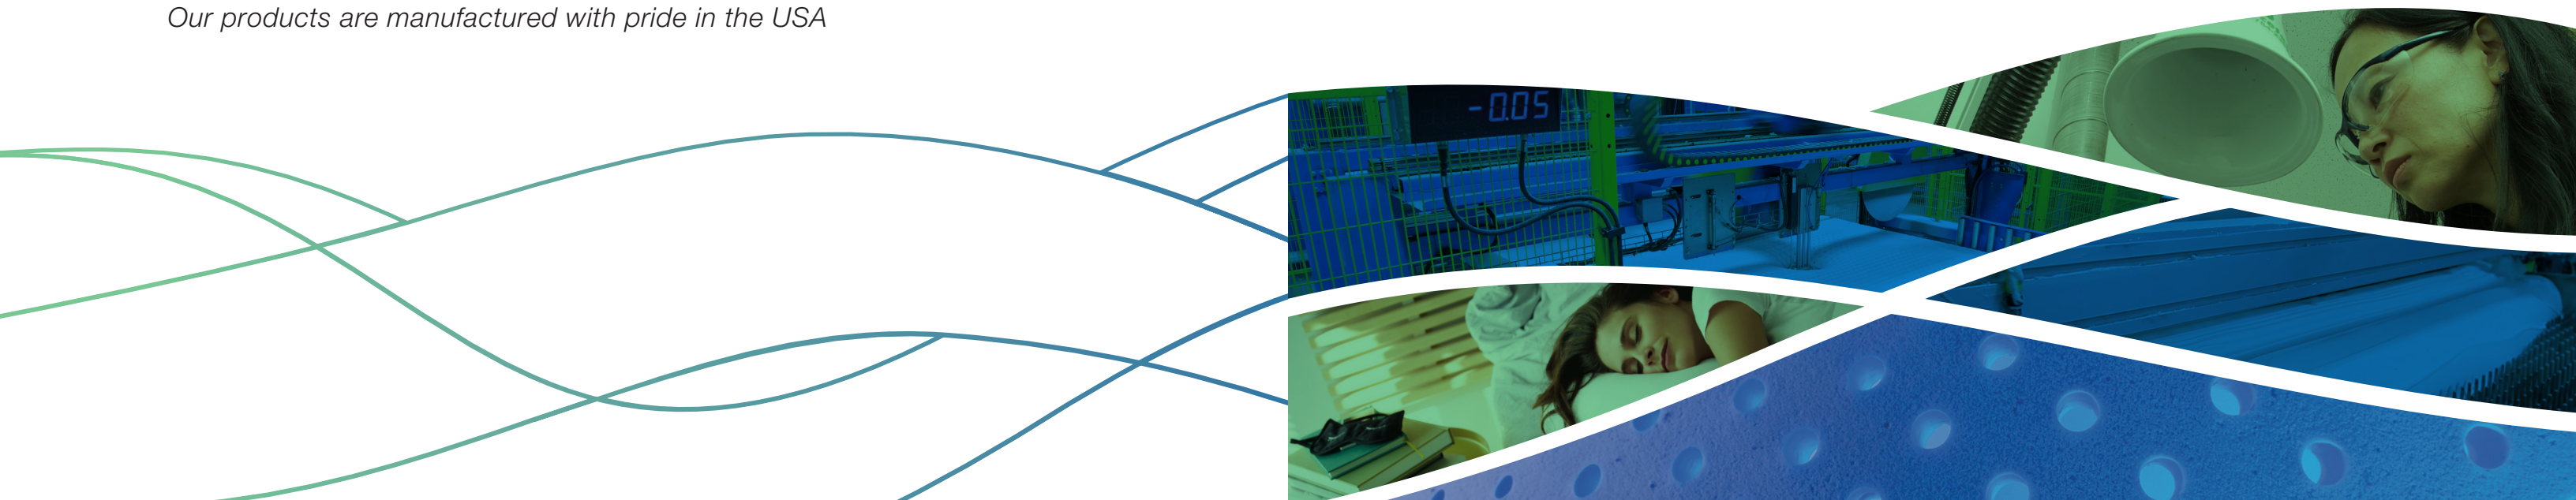

Breathability

Specialized formulations and natural ventilation for improved airflow and a cooler sleeping temperature

Made in America

Our products are manufactured with pride in the USA

SETTING A SUPERIOR LATEX PROCESS IN MOTION

At Mountain Top Foam, we envisioned a better way of making latex.

From that vision, we invented, patented and continue to perfect Perpetua™, our proprietary continuous-pour process. Our advanced next-generation Dunlop process is grounded in cutting-edge science and technology that keep the latex particles in constant motion to prevent settling. Unlike other processes in the industry, we don't pour into a one-size-fits-all mold. We pour onto a continuously moving line so we can cut our cores to any size. Every step in the process is automated and integrated, ensuring that the product is free of minor imperfections. That means a higher-quality product – every time.

But our refusal to settle for anything less than excellence runs even deeper – starting with the proprietary specialized formulations developed by our in-house chemists. That continuously improving chemistry, combined with Perpetua, is truly the science behind a better night's sleep.

Don't settle for the competition.

Long-Lasting Durability	X			
Broad Range of Feels	X	X		
High Support Factor	X		X	X

Discover our eco-friendly process.

We pride ourselves on being an ecological, 95% green organization. That's why we recycle all of our materials and have an in-house wastewater treatment plant. We're committed to respecting the environment throughout the process, which is why we were the first North American latex producer to be certified by the Forest Stewardship Council®. Our FSC® certification with NEPCo is recognized by the Rainforest Alliance.

PERPETUA™: THE MOST
ADVANCED & CONSISTENT
PROCESS IN LATEX FOAM

Step 1:
Static Mix

Cutting-edge technology continuously mixes the compounds to eliminate settling.

Step 2:
Foaming

Air is added to create a lather and precisely control and adjust the firmness levels (ILD).

Step 3:
Continuous Pour

Robotic arms pour liquid latex onto a continuously moving line to avoid settling. This evenly distributes latex particles for consistent comfort.

Step 4:
Cure

The steam-heated atmosphere cures and solidifies the foam.

Step 5:
Freshwater Wash

A 6-step freshwater wash purifies and pre-stresses the material for long-lasting durability.

Step 6:
Dry

Residual moisture is removed, and a final cure helps to strengthen the latex foam.

Step 7:
Fabrication

The latex is cut precisely to the desired size. No gluing or seaming is required.

Step 8:
Quality Testing

Each mattress core undergoes a series of rigorous quality control checks to ensure continuous comfort.
